List of Attachments

The following documents are excerpts from the Permittee's RCRA permit application. The listed documents are hereby incorporated, in their entirety, by reference into this permit. These incorporated Attachments are enforceable conditions of this permit as modified by the specific permit conditions.

Attachment 1:	Facility Description.
Attachment 2:	Waste Analysis Plan.
Attachment 3:	CAMDS Laboratory and Monitoring Quality Control Plan
Attachment 4:	Security Procedures and Equipment.
Attachment 5:	Inspection Plan.
Attachment 6a:	Subpart CC Compliance Plan
Attachment 6b:	Subpart BB Compliance Plan
Attachment 7:	Personnel Training
Attachment 8:	Preparedness and Prevention of Hazards
Attachment 9:	Contingency Plan.
Attachment 10:	Closure Plan/Quality Assurance Project Plan (QAPP).
Attachment 11:	CAMDS Facility Drawings.
Attachment 12:	Containers, Storage & Waste Piles
Attachment 13:	Tank Systems
Attachment 14:	Subpart X Units.
Attachment 15:	Incinerator Systems
Attachment 16:	Site Monitoring Plan
Attachment 17:	CEMS.
Attachment 18:	Filter Systems
Attachment 19:	RESERVED
Attachment 20:	RESERVED

Definitions

For purposes of this permit, the following definitions shall apply:

Word / Phrase	Permit Definition
"Closure Device"	A cap, latch, lid, plug, seal, valve, conservation vent or other type of fitting that blocks an opening in a cover (container or tank) such that when the device is in the closed position it prevents or reduces air emissions to the atmosphere. Closure devices can be detachable, manually operated, or automatically operated (eg. spring loaded pressure relief valve)
"Control Board"	the Utah Solid and Hazardous Waste Control Board.
"Director"	the Director of the Utah Division of Solid and Hazardous Waste.
"Executive Secretary"	the Executive Secretary of the Utah Solid and Hazardous Waste Control Board
"Facility"	all contiguous land; and structures, and other appurtenances, and improvements on the land at the Deseret Chemical Depot.
"GA"	the anticholinesterase agent Tabun with the chemical name of Ethyl N,N-dimethylphosphoramido-cyanidate.
"GB"	the nerve agent Sarin with the chemical name of Isopropylmethylphosphonofluoridate.
"H"	blister agent mustard prepared through the Levinstein process with the chemical name of Bis(2-chloroethyl) sulfide or 2,2'-dichlorodiethyl sulfide - sulfur mustard.
"HD"	blister agent mustard that has been purified by washing and vacuum distillation.
"HSWA"	the Hazardous and Solid Waste Amendment of 1984 and 1993.
"HT"	blister agent mustard that is a 60:40 mixture of HD and T (bis[2(2-chloroethylthio)ethyl] ether).
"L"	the vesicant agent Lewisite with the chemical name dichloro-2-chlorovinylarsine.
"NRTs"	Near Real Time Monitors: A monitor that has the capability to automatically collect a sample, analyze the sample, and report/display the sample analysis results within 15 minutes or less. Examples of NRTs used at CAMDS for agent detection are ACAMS, MINICAMS®, and RTAPs.
"Operating day"	any fraction of a calendar day when operating any unit under this application.

"Point of Waste Origination"	When the facility owner or operator is the generator of the hazardous waste, the point of waste origination means the point where a solid waste produced by the system, process, or waste management unit is determined to be a hazardous waste as defined in R315-2. In this case this term is being used in a manner similar to the use of the term "point of generation" in air standards established for waste management operations under authority of the Clean Air Act (CAA) CFR Parts 60, 61, and 63.
"RCRA"	the Resource Conservation and Recovery Act of 1976, as amended by HSWA in 1984 and 1993.
"Release"	a spill or discharge of hazardous waste, hazardous constituents, or material that becomes hazardous waste when released to the environment.
"Spill"	the accidental discharging, spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous wastes or materials which, when spilled, become hazardous wastes, into or on any land or water.
"CAMDS Facility"	Chemical Agent Munitions Disposal System Facility and the Chemical Agent Munition Disposal System laboratory, building 541, and building 4104 and 4105.
"VX"	the nerve agent with the chemical name O-ethyl S- (2-diisopropylaminoethyl) methyphosphonothiolate.
3X	that the item has been surface decontaminated (if required) by locally approved procedures , bagged or contained, and that appropriate tests or monitoring has verified that vapor concentrations 0.003 mg/m ³ for mustard agents, 0.0001 mg/m ³ for agents GA/GB and 0.00001 mg/m ³ for agent VX do not exist. Monitoring is not required for completely decontaminated and disassembled parts that are simply shaped (no crevices, threads, etc.) and are made of essentially impervious materials (simple lab glassware, steel gears, etc.). Reference DA PAM 385-61 <i>Toxic Chemical Agent Safety Standards</i> .
5X	that the item is clean and may be released from Government control without precautions or restrictions. The approved method of achieving 5X level is subjecting items for a sufficient time at a sufficient temperature to completely destroy agent. For disassembled items, heating the items to 1000° F (538° Centigrade) for 15 minutes is considered sufficient. Where items cannot be disassembled to component parts, more time may be required to assure all contaminant is destroyed. 5X condition must be certified by commander's designated representative. Reference DA PAM 385-61 <i>Toxic Chemical Agent Safety Standards</i> . See also <i>Test Report for Chemical Agent (VX, GB, and HD) 5X Decontamination Verification - Test Report No. 32-57a, March 1996</i> .

Acronyms and abbreviations used in this permit shall be defined as designated in the "List of Acronyms" section of this application.

All definitions contained in R315-1, R315-2, R315-3, R315-8, and R315-9 are hereby incorporated, in their entirety, by reference into this application, except that any of the definitions used above shall supersede any definition of the same term given in R315. Where terms are not defined in the regulations or the permit, the meaning associated with such terms shall be defined in the regulations or the permit, the meaning associated with such terms shall be defined by a standard dictionary reference or the generally accepted scientific or industrial meaning of the term.
